

## VÁLVULAS

Gestión de Compras suministra todo tipo de válvulas, según normativas ANSI, ASA, BS, DIN, ISO, China GB/T, etc., así como según especificaciones del cliente.

Suministramos válvulas de mariposa, válvulas tipo WAFER, válvulas de bola, válvulas de compuerta, válvulas globo, válvulas de retención, válvulas de control, válvulas antirretorno (hidráulica), válvulas de diafragma, etc.

En cuanto a los materiales, los más utilizados son el acero al carbono, acero inoxidable, bronce, fundición, etc.

## Butterfly Valves

Butterfly Valve BV1000 Butterfly Valve BV2000 Butterfly Valve BV3000 Butterfly Valve BV4000

### Butterfly Valve BV1000W Dimensions and Weight

BV1000W is Wafer Butterfly valve. It can be manufactured as with pin butterfly valves or without pin butterfly valves. The size is for 2"(DN50) to 40" (DN1000). It is with back-up seat and double D type disc. The connection between the discs and stems is of three types, square connected, key connected, spline connected. Valve body features four alignment holes. Valve with handles (2" to 12"), Manual Gear Operators (2" to 40") and electric or pneumatic actuators (2" to 40"). Face to face dimensions are available in GB 12238 BS5155 API609, MSS SP-76, DIN 3202-K1 (ISO 5762 T5). Flange drilling according to: GB9112-88, DIN2501, BS4504, ISO2084, ISO2531, BS10-E, ANSI125/150, ASA125/150, AS2129 Table D/E. Valve tested: API598 Safe working pressure: PN6,10,16.

## Butterfly Valve BV1000S Dimensions and Weight

BV1000S is Wafer Butterfly valve. The size is for 2"(DN50) to 40" ( DN1000). It is with back-up seat and double D type disc. Valve body features six alignment holes. Valve with handles (2" to 12"), Manual Gear Operators (2" to 40"), and electric or pneumatic actuators (2" to 40")

Face to face dimension are available in GB 12238 BS5155 API609, MSS SP-76, DIN 3202-K1 (ISO 5762 T5).

Flange drilling are universal standard, suitable for DIN PN10/PN16 ANSI 125/150 JIS 10k as well.

Valve design : ISO 7005-2

Valve tested: API598

Safe working pressure: PN6,10,16.

### Butterfly Valve BV2000W

BV2000W is Wafer Butterfly valve with pin. The size is for 2"(DN50) to 14" ( DN350). It is with soft seat and double D type disc. Valve body features four alignment holes at least. Valve can be mounted with handles (2" to 12"), Manual Gear Operators (2" to 14"), and electric or pneumatic actuators (2" to 14")

Face to face dimension are available in GB 12238 BS5155 API609, MSS SP-76, DIN 3202-K1 (ISO 5762 T5).

Flange drilling are universal standard, suitable for DIN PN10/PN16 ANSI 125/150 JIS 10k as well.

Valve tested: API598

Safe working pressure: PN6,10,16.

## Metal Sealed (Hard Sealed) Butterfly Valve Dimensions and Weight

### Model: Hard Sealed Butterfly Valve (fig: BV5000 W)

This kind of butterfly valve is suitable for use in Chemical, Oil, power generating, metallurgy industries and city heat-supply system as a flow adjusting and shutting unit.

- Safe and reliable in operation, high interference-resistance.
- Adopting design of double-eccentric, the friction on sealing ring may be decreased to extend service life.

## Dimensions and Weight

Size (DN)	L	D1	D	Z-d	H	Ho	A	B	Wt/ kgs
50	43	125	165	4-18	112	460	355	92	16

Suitable Medium	Water, Steam, Oil, Sea Water, Acids ect		
Suitable Temp	-40--- 570		

## Flanged Butterfly Valve Dimensions and Weight

### Soft--Seal Eccentric Flanged Short Body Butterfly Valve (fig: BV6000S) Soft--Seal Eccentric Flanged Long Body Butterfly Valve (fig: BV6000L)

- Flanged butterfly valves are also called double flange butterfly valves, they can be of double flange with short butterfly valves or with long butterfly valves.
- This valve can be used for water supply and drainage systems in water works, power generating factory, mill plant, paper-making, chemicals and foods industries, especially suitable for use as an ideal equipment for throttling or shutting off flow in water pipelines.
- Simple and compact in construction, light in weight, quick for on-off operation in 90 degree.
- The double eccentric structure reduces friction of the sealing ring, providing the valve a long service life .
- Replacing materials of the disc sealing ring "O" ring ,disc and shaft ,the valve can be used for various medium and temperature.
- Flange connection is in accordance with GB4216.1, -4216.4-84" Grey Cast Iron Pipe Flanges and Gaskets" and PN1.0 Mpa, PN1.6MPa flange-connection standard given in BS4504,ISO2084,DIN501.

### Grooved End Butterfly Valve PN16/Class150

**Valve Standards:** Complies with EN593/BS5155/MSS SP-67.

Complies with EN593/BS5155/MSS SP-67

#### Working Pressure and Temperature

Working pressure PN20/Class150.

Temperature from -10° to 120° for EPDM coated disc.

Temperature from -10° to 82° for NBR coated disc.

Temperature from -10° to 150° for Viton coated disc.

**Top Flange:** Complies with ISO5211/1.

#### Flange Types

Grooved dimensions comply with Metric or ANSI Pipe standards

**Operator:** Handle or gear operator.

Item	Parts Name	Materials

## Butterfly valve Main Part Material

### Body of Material

Type of Material	Material Standard
Cast Iron	GG20 GG25, ASTM A126 Class B
Ductile Iron	GGG40, ASTM A536 60-40-18
Cast Bronze	ASTM B584 G90500
Stainless Steel	CF8M, CF8, ZG1Cr18Ni9Ti
Carbon Steel	WCB

### Disc Material

Ductile Iron (Nickel Plated or Nylon Coated)	ASTM A536 60-40-18 DI
Stainless Steel	SS410, SS304, SS316
Aluminum	Al-Bronze

### Stem Material

Stainless Steel	SS410, SS304, SS316
Cast Steel	WCB (chrome plated)

### Seat Material of Body Liner Material

Material	Temperature Ratio	
	°C	°F
Buna-N(NBR)	-12----85	+10----185
Buna-N(Abrasive Resistant)	-12----85	+10----185
Neoprene	-7----93	20----200
EPDM	-35----135	-30----275
EPDM (Food Grade)	-35----110	-30----230
Hypalon	-32----135	0----275
Vinton	-12----135	10---275
PTFE	4.4----121	40---250

Seat Materials are capable of standing lower temperatures without damage. However it would become hard and torques would increase. Some flow media may further rest published temperature limits or significantly reduce seat life.

### Valve Seating Torques (in Lbs.)

40"	1000	ii	ii	ii	ii	ii	ii	ii	ii
48"	1200	ii	ii	ii	ii	ii	ii	ii	ii

The above torque values are only available for ANSI Class 125 Working pressure designed butterfly valves size from 2" to 30". Or for PN16 working pressure designed valves size from DN50 to DN300. All torque values shown on chart are for "wet" (water and other non-lubricating medium) on-off service. For "dry" service (non-lubricating, dry gas media), multiply values by 1.6. For "lubricating medium" service (clean, non-abrasive lubricating media), multiply values by 0.85. When sizing actuators for single valve applications, multiply values by 1.25. When sizing for 3-way ("tee") applications multiply values by 1.5.

Under certain conditions, hydrodynamic torque can meet or exceed seating and unseating torques. When designing valve systems, hydrodynamic torque must be considered to help ensure correct selection of application.

### Cv value of Butterfly Valve

The valve Cv is the flow rate (in US gal/min) of pure water at 600F passing through the valve when the valve disc is fully opened and the pressure differential between the two ends of the valve is 1 Lbf/in<sup>2</sup>

$$Cv = \sqrt{\frac{G}{P_1 - P_2}}$$

- V. Max. Flow (in us gal/min) G:
- Specific gravity (1 for water)
- P1: Inlet side pressure (Lbf/in<sup>2</sup>)
- P2: Outlet side pressure (Lbf/in<sup>2</sup>)
- Cv = 1.17C

Conversion of flow resistance coefficient and Cv value

$$Cv = 29.9 \frac{d^2}{\zeta}$$

- d: Valve bore size or valve seat bore size (in)
- ζ: Flow resistance coefficient (no unit)

## Detail Specification for Wafer & Lug Butterfly Valve

The valve is ideal for throttling or shutting off the flow of corrosive or incorrosive gases, liquids, semi-liquids and solid powder, and can be installed in pipelines or on vessels in the industries of petroleum processing, chemicals food, medicine, textile, paper making, hydroelectricity engineering, ship building, water supply and sewage, metallurgy, energy engineering as well as light industry etc.

- Small in size and light in weight. Easy installation and maintenance. It can be mounted wherever needed.
- Simple and compact construction, quick 90 degrees on-off operation. Minimized operating torque, energy saving.
- Long service life, Standing the test of tens of thousands opening/closing operations.
- Bubbles-tight sealing with no leakage under the pressure test
- Wide selection of materials, applicable for various medium.

Item NO.	Name of Part	Performance Feature
01	Check Ring	Provides prevention of blow out of shaft
02	O-ring	Provides prevention of outside dust
03	Body	Precision Cast Iron Body or Ductile Iron Body, According with various connection standards
04	Bush	Furnishes stem support for positive stem alignment and actuator support
05	Seat	Bonded to body or inserted
06	Disc	Provides double-tight shut-off and assures minimum torque and longer seat life
07	Stem	Ensures dependability and positive disc positioning, blow out proof design stem
08	Splinted (Tapered pins)	Ensures positive shaft to disc connection, convenient for field replaceable, furthermore, Using of splint reduces possibility of leakage through disc and shaft

## Check Valves

### Wafer Check Valve Technical Data and Installation

**MODEL: WAFER CHECK VALVE (CW1000, CW2000, CW3000, CW4000)**

Wafer check valve is a general purpose and one way flow valve. Due to lighter in weight and short dimension, wafer check valve is very easy to be installed between flanges. Inner parts assembled by two semicircle springs and plates, which pinned to the body. Normally closed by spring action and open by fluid pressure. Because the spring cycle reaction is very quick, it could protect the pipe from wafer hammer.

#### Precautions in piping

- Lay pipes so that the cast direction of wafer check valve body corresponds with the flow direction.
- It can be installed in vertical piping. In horizontal piping, set the rib wafer check valve vertically.
- Use an extension tube between wafer check valve and butterfly valve, never connect the wafer check valve to the valve directly.
- Avoid entering the end of a tube or gasket within the operating of a radius of the wafer check valve discs.
- Never mount a reducer just in front of or behind the wafer check valve
- When installing a wafer check valve near an elbow, leave a space as large as possible between them.
- When installing a wafer check valve at a pump outlet, leave a space at least 6 times of valve diameter and be sure that the plate is evenly stressed by fluid.

## Dual Plates Wafer Check Valve

Wafer check valve ,we also call butterfly check valve, our CW1000 is a save-energy product, manufactured based on the foreign advanced technology and in accordance with relative international standards. This product is featured by excellent retaining performance, high safety and reliability and low flow resistance. It is suitable for systems in the industries of petrochemical, food processing, medicine, textile, paper-making, water supply and drainage, metallurgy, energy and light industry etc used a check valve in one way

MODEL: CW1000

1. Valve Design to API 594
2. Valve Test to API598. BS6755
3. Face to Face :EN558-1 Basic Series 16(Wafer Long ),GB12221-89

### Dimensions of CW1000(unit: mm)

Size	50	65	80	100	125	150	200	250	300	350	400	450	500	600

## Wafer Check Valve CW2000 series

is cast iron body, the face to face dimension is according to ANSI B16.1 125 . Valve test to API 598,BS6755. The safer working pressure are 10 lbs and 16 lbs. This kind of wafer check valve is used for preventing the back-going of medium in pipelines and equipments, and the pressure of medium will bring the result of opening and closing automatically. When the medium is back-going, valve disc will automatically close to avoid accidents.

### Dimensions of CW2000 (unit: inch&kg)

Size	L	B	C	D	CV	Weight

### CW3000 is our new wafer check valve series.

The design of CW3000 is same with CW1000. But the body material is Cast Steel. Face to Face dimension is ANSI B16.1 CL150. It can work under 16 lbs. This wafer check valve is tightly sealed, without leakage under the pressure water test. Safe and reliable in operation, high interference-resistance.

### Dimension of CW3000 (unit: inch&kg)

### Thin Wafer Swing Check Valve (Single Plate Wafer check valve)

MODEL: Wafer Check Valve-----CW6000 Series

Wafer Design with or without spring closing

Valve design to ANSI125 ---- ANSI 600 design

Extremely low crack opening pressure

Extremely low pressure drop

Efficient flow characteristic

Short overall length wafer design

Centering achieved by means of body outside diameter

Standard Elastomer Seating or metal and metal seating provided.

Single plate wafer check valve with spring loaded or non spring loaded available.

## Lift Check Valve

The components of lift check valve are made of high quality copper alloy, Teflon, and stainless steel, which are excellent corrosion and abrasion resistant. This check valve may be mounted in vertical or horizontal position also compact and lightweight design gives ease of installation, service and maintenance, and reduces installation time.

NO	Name of Part	Material
1	Body	Cast Iron
2	Disc Holder	Cast Iron
3	Buffer	Cast Iron
4	Upper Guide	Ductile Iron
5	Seat Ring	Bronze
6	Disc Washer	Steel Plate
7	Spring	SS304
8	Soft Seat	NBR
9	Hinge Stem	SS400

#### Technical Data

Applicable Fluid	Water, Oil
Applicable Inlet Pressure	Max, 10kgf/cm <sup>2</sup>
Applicable Temperature	Max, 80jæ(Special Order : Max 120jæ)
Min, Pressure Differential across the Disc	0.05-----0.1 kgf/cm <sup>2</sup>
Leakage Allowance	0
End Connection	Flanged
Hydrostatic Test	15kgf/cm <sup>2</sup> ----- 3 min

#### Lift Check Valve

Non Slamming.  
 Spring closing for positive leak tight closing.  
 Lighter, Smaller, Robust, Less expensive, Easy to install and maintain. Installation between flanges.  
 Installation in any place and direction.  
 Very low opening pressures.  
 Valves are Self contouring type.  
 Valves available in soft & metal to metal seat.  
 Zero leakage for Soft Seated Valve.  
 Testing as per API 598 or as per clients requirement.  
 Available in PN 10 and ANSI 125 rating.

## Smolensky Check Valve

The smolensky check valve is the lift check valve added by pass. It can make a function of harmless check valve, dashpot check valve.

- Water Hammer!-The Enemy of Flow Pipeline

The water hammer occurs by sudden flow stopping caused by pump-off or pressure wave caused from the pipes bending.

- Smolensky check valve --- No Impact , No Dining.

This commodity is the superb check valve designed to prevent the water impact with the operation of buffer hill&spring inside, thereby the water hammer&breakage of the pipes can be protected.

- Theory of Operation

When the pump starts, the pressure of the fluid pushes disc(2)then the fluid flows to chamber (c) through the chamber (A) &(B). When the pump stops, momentarily the pressure in the pipeline falls down then the short stagnation of the flow occurs and the reverse flow follows soonest. But at the same time by the action of spring(1)&buffer hill (4)disc(2) adheres to body seat(3)therefore any reverse flow&water hammer can be prevented.

- Advantage

- No water hammer
- No trouble by the simple structure
- Easy repair
- When the repair or replacement of the pipe is done, the water in the body champer is drained by the attached by-pass valve.
- No impact &noise
- Scrupulous &safe check
- No leakage
- Available for the vertical and horizontal piping connection
- Body and other part materials can be selected by customers' requests & sites' conditions

## Balance Valve

### SPF(SP) Series Numerical-Locked Balance Valve

SPF(SP) series numerical-locked balance valve is mainly used in liquid pipelines of water power working conditions. It has excellent regulating function, cutting-off function, the valve opening display unit and the valve opening locked function as well. When Used in heating supply system and air-conditioning water system, the valve helps to save heat and electric energy. Due to its excellent service, PF(SP) series numerical-locked balance valve is one of the best regulating valves made-in-China, as a professional manufacturer and experienced world-wide supplier, we enjoy good reputations among our global customers.

#### Function and characteristics:

- Excellent regulating function;
- Excellent cutting off function;
- The display precision of the valve opening is up to 1/10 revolution;
- The characteristic curve of theoretical flow is (approximately) uniform percentage characteristic, when the valve opening is 30%-50%, the actual flow characteristic is linear;
- The valve opening locked function, thus, non-property management staff cannot change the set state.
- Pressure and flow can be regulated conveniently and effectively; the intelligence instrument, which shows the working pressure differential and the flow to the users' convenience, can guide and record the balancing and regulating schemes as well;
- Teflon sealed, the sealing is reliable and durable;
- According to the percentage of the valve opening and pressure differential, the valve flow can be calculated;
- The internal components are made of stainless steel, copper alloy, the anti-rust performance is better;
- It is not necessary to preset the operating space for the internal lift stem;

- Materials of valve body:  
DN15-DN300 Gray Cast Iron;  
DN350-DN600 Carbon Cast Steel;

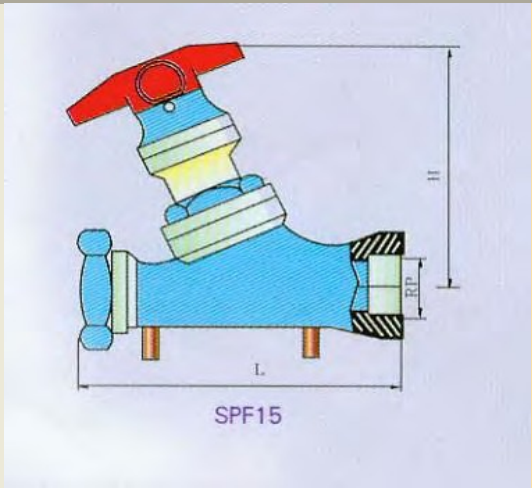

## DN15-DN32 Forging Pressed Copper Alloy

25	1	125	125
32	5/4	140	130
40	3/2	160	140

#### Configuration

- SPF15T-16 numerical-locked balance valve is equipped with inclined stem, internal lift, teflon-sealing. The body material is forging pressed copper alloy.
- Two small pressure gauge/test valves are mounted at both sides of the balance valve. By using hose they are connected with the intelligence instrument, which shows the pressure differential and flow of the valve well and truly. The pressure differential can be measured by using other methods too, then the flow can be figured out as well.

**SPF(SP) Series Numerical-Locked Balance Valve**

**The explanation of the following diagrams**

According to the formula:  $Kv=Q/\sqrt{\Delta P}$  , Q-m<sup>3</sup>/h, ΔP-100kpa (1kgf/cm<sup>2</sup>).

**Example 1** : When the flow Q and ΔP are known, that is Q=20m<sup>3</sup>/h, ΔP=30kpa, the diameter and the opening can be obtained by following this procedure:

Obtain the numerical values on Q-axis and ΔP-axis and draw a line between the two numerical values, then the point of intersection between the line and Kv-axis can be obtained. Draw a horizontal line which starts from the point of intersection. The the horizontal line will intersect with the valve opening scales of

DN50, DN65, DN80, then the valve opening obtained are 74%, 46%, 20%, that means the balance valve can select any one from among the above-mentioned three diameters (See Diagram 1).

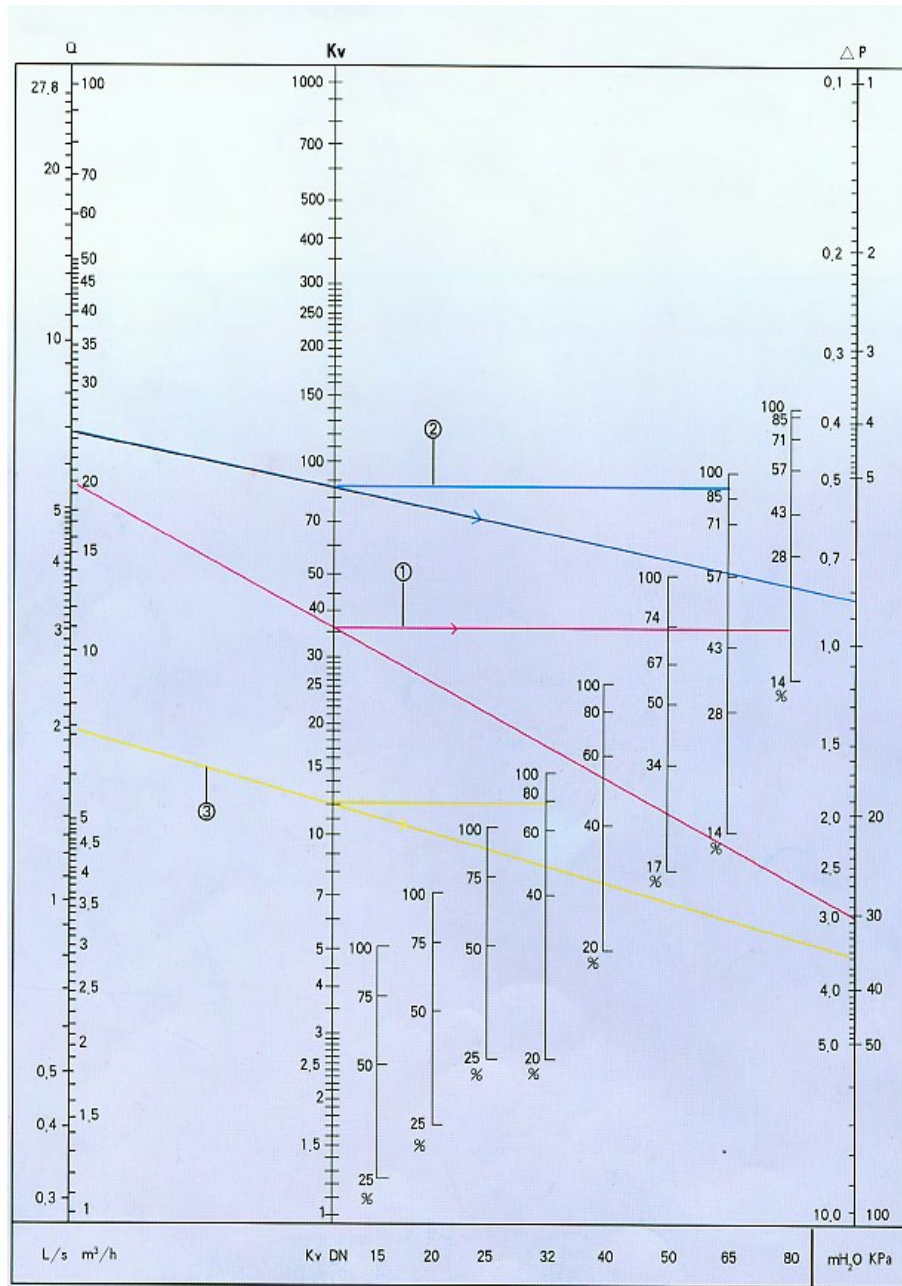

**Example 2** : when the flow  $Q$  and diameter and the valve opening are known, that is  $Q=25 \text{ m}^3/\text{h}$ , DN65, the valve opening is 90%, the pressure differential  $\Delta P$  can be obtained as follows:

Draw a horizontal line which starts from the point of 90% opening of DN65. The point of intersection between the horizontal line and  $K v$ -axis can be obtained. Draw a line between the point of intersection and the point of  $25 \text{ m}^3/\text{h}$  on  $Q$ -axis and extend the line to  $\Delta P$ -axis, then  $\Delta P=8.0\text{kpa}$  can be easily figured out (See Diagram 2).

**Example 3** : when  $\Delta P$ , diameter and the valve opening are known, that is  $\Delta P=35\text{kpa}$ , DN32, the valve opening 80%, the flow can be obtained as follows:

Draw a horizontal line which starts from the point of 80% opening of DN32. The point of intersection between the horizontal line and  $K v$ -axis can be obtained. Draw a line between the point of intersection and the point of  $35\text{kpa}$  on  $\Delta P$ -axis and extend to  $Q$ -axis, the flow rate=  $7.4 \text{ m}^3/\text{h}$  can be obtained (See Diagram 3).

## Multifunctional Valve

As a professional supplier and manufacturer in China, our multifunctional valve is three valves in one.

- A calibrated balancing valve
- A shut-off valve
- A center-guided non-slam check valve
- We also can make the multifunctional valve with five functions according to customers' requirements, such as, adding a by pass or a mesh. If it is equipped with a mesh, it can function as a strainer. If it is equipped with a bypass, it can function as a dashpot valve.

Replacing three valves with just one multifunctional valve can dramatically lower your up-front materials and labor costs.

Main Features/Advantages:

- 1) The streamlined design of the multifunctional valve results in low pressure drop, making it extremely energy efficient.
- 2) Three valves in one reduces the cost to the minimum.
- 3) Greater range of control enable customers to get precise flow control in comparison with on-off throttling valves.
- 4) Positive shut-off without valve chatter.
- 5) Calibrated nameplate allows the return of valve to the balance position after shut-off.
- 6) Durable bronze seat, stainless steel stem and bronze disc construction guarantee a long service lifetime.

Balancing is obtained to improve the performance of a closed circuit, with forced circulation water systems for heating & cooling because of the variation in water flow in different systems. Balancing enables the plant to provide the desired indoor climate under all operating conditions, at minimum energy cost & with a modest input of time & labor. Balancing is achieved by adjusting pressure drop in order to get precisely the right flow of water at all times. Balancing reduces energy costs by almost 10% to 40%, by reducing average temperature in heating & by increasing average temperature in cooling, therefore, the fall in energy consumption of pumping is realized.

In order to attain hydraulic homogeneity & comparability throughout the plant, production & distribution including controlled circuits have to be balanced.

The Multifunctional Valve is a double-regulating, control and shut-off valve with built-in pressure drop measuring (in line flow measuring) facility. Balancing problems are quite evident in a multi-user systems, like central air conditioning plants and in process heat exchangers. The multifunctional valve is a combination of a shut-off valve (gate/plug/ball/butterfly Valve) plus flow regulating valve (globe valve) and flow measuring station and also a drain cock (available in bronze valves only). It is not merely a valve but also a system in itself. It provides a scientific basis for flow balancing in a system with database. The multifunctional valve can be set in pre-regulated flow conditions for tamper-proof positioning by a built-in locking device. The multifunctional valves are extensively used in HVAC systems and other process applications wherever balancing problems exist.

### The multifunctional valve

#### *Design Features*

The multifunctional valve is a Double Regulating, Control and Shut-off Valve with built-in pressure drop measuring (in line flow measuring) facility. Balancing problems are quite evident in a Multi-User systems, like Central Air Conditioning Plants and in Process Heat Exchangers. The Valve is a combination of a Shut-Off Valve (Gate/Plug/Ball/Butterfly Valve) plus Flow Regulating Valve (globe Valve) and Flow Measuring Station and also a Drain Cock (available in Bronze Valves only). It is not merely a Valve but a system in itself. It provides a scientific basis for Flow Balancing in a system with database. The Valve can be set in pre-regulated flow conditions for Tamper-Proof positioning by a Built-in Locking Device. The Valves are extensively used HVAC systems and other process applications wherever balancing problems exists.

## The Multifunctional Valve TO-01 Specification

Part No.	Name of Part	Material
1	Body	Cast Iron
2	Bonnet, Cover	Cast Iron <sub>ii</sub>
3	Cover O-ring	Rubber
4	Spring	Stainless Steel
5	Disc Rubber	NBR
6	Disc Holder	Cast Iron
7	Packing	Bronze <sub>ii</sub>
8	Indicator	Iron <sub>ii</sub>
9	Valve Stem	SS304 <sub>ii</sub>
10	Cover Bolt	SS304
11	Hinge Stem	Stainless Steel
12	Packing	Cast Bronze
13	Screen	SS304
14	Bypass	Brass

## TO-01 Technical Data

ii	TO-01
Applicable Fluid	Water, Oil
Applicable Inlet Pressure	Max, 10kg/cm <sup>2</sup>
Applicable Temperature	Max, 82;æ (Special Order: Max 120;æ)
Min, Pressure Differential across the Disc	0.04----0.07kgf/cm <sup>2</sup>
Leakage Allowance	0
End Connection	ANSI B16.1 CL125, BS4504 PN10
Hydrostatic Test	15kgf/cm <sup>2</sup> -- 3min

## The Multifunctional Valve

User's complaints about unbalanced, hot or cold in different parts of the building are avoided.

System design and installation error are easily corrected.

Once completed a system hardly ever works exactly the way it was desired.

Methods of calculation of pressure drop and flow rates are often inaccurate or inaccurately applied.

System components like boilers/chillers, circulation pumps, valves etc. do not have to be oversized for possible errors and varying conditions" Just to be on the safe side".

A balanced system do not need such "reserves" only, but needs the actually required flow usually less than a system which is not balanced and can thus save heating/cooling energy.

The multifunctional valve often replaces system components selected for system design, by other brands or types, which may have different characteristics. The entire system design may thus become more or less inaccurate.

## The Multifunctional Valve (TO-01,TO-02,TO-03)

Face to Face : EN558-1 Basic series 1, GB /T 12221-1,DIN3202 F1, BS4504 PN10

Safe Working Pressure: PN10

**MODEL:** The multifunctional valve TO-01(Three-one Multipurpose valve)  
It can play as Calibrated balancing valve, shut-off valve, center-guided non-slam check valve

**MODEL:** The multifunctional valve TO-02( Four-one Multipurpose valve)  
It can play as Calibrated balancing valve shut-off valve, center-guided non-slam check valve and strainer.

**MODEL :** The multifunctional valve TO-03 ( Five-one Multipurpose valve)  
It can play as Calibrated Balancing valve, shut-off valve, center-guided non-slam check valve, strainer and dashpot valve.

**Dimensions of Multifunctional Valve(TO-01,TO-02,TO-03)**

## Gate Valves

*Gate valves* can be left open, or closed, on a variety of water, gas and chemical duties for long periods with the guarantee of satisfactory operation as required. With easy, reliable, safe operation, clearance sealing and easy installation and maintenance, it can effectively control and prevent the disk from erosion.; Attempting fine control or throttling may lead to serious gate erosion. Overhead clearance for high steam, high lift valves is needed for installation and maintenance. Service with heavy solids in suspension could be troublesome-possibly creating seat wear and shut-off problem. A multi-turn valve has a gate-like disk and two seats to close the valve. The gate moves linearly, being perpendicular to the flow direction. This type of valve is normally used in the fully opened or fully closed position. It is not suitable for throttling applications. Gate valves provide robust sealing and are used extensively in the petrochemical industries. This type of valves also includes knife gate valves, conduit gate valves and wedge gate valves. Knife gate valves have much thinner gates with a knife-like edge, making them suitable for floating solids, e.g., such as in the pulp & paper industries. Conduit gate valves have a rectangular disc as the closing element. One half of the disk is solid, which is used to close the valve, the other half has a circular port, which is used to open the valve. Wedge gate valves have a wedge-shaped gate which "wedges" between floating seats and close the valve tightly.

A guillotine valve has been preferred to a spherical valve concept which implies a too long stroke for the filter. The closing and locking operations of the valve is as follows; first, the gate valve is pushed by a screw driven by the motor, from its retracted position towards closed position. When the gate valve reaches this position (the extremity of the caplet against the body), the internal mechanism of the gate valve activated by the screw makes its thickness increase until the movement is stopped by the main body of the valve.

Our **Top Flow Rubber Seated Gate Valves** are manufactured with the care and craftsmanship you can expect from a company that specializes in designing and manufacturing valves for petroleum industry.

All Top Flow products are designed and tested to ensure reliability and integrity for long-term safe operation. They are also engineered, manufactured and tested under our ISO 9001 Certified Quality Program. All valves are subject to visual inspections, pressure testings and all critical dimensions and specifications are guaranteed to meet API and ANSI codes. All materials used in the manufacturing process meet or exceed ASME and ASTM specifications.

Every Gate Valve features easy-to-replace seats that ensure tight sealing, even under the most rigorous field conditions. From design to manufacture and testing, we are one of the best supplier and manufacturer of gate valves made-in-China. **Our Top Flow Rubber Seated Gate Valves** are built for reliable and safe performance in the field.

Major applications:

- Wellheads;
- Pipelines and manifolds ;
- Drilling and chemical treatment;
- Oil, gas and water pipelines;
- Sour gas and crude oil;
- Abrasive and corrosive mud, cements, slurries and water flood;

## Cast Iron Gate Valve NRS Solid Wedge Disc Flanged Ends

### Description

1. Conforms to MSS SP-70
2. Flanges drilled to ANSI B16.1 (125lb)
3. Face to face dimensions conform to ANSI B16.1(125lb)
4. Working pressure:125S,200WOG
5. Suitable media: water, oil, gas.
6. Construction available in all iron.

### Materials list

NO.	Part name	Material	American Standard
1.	Body	Cast Iron	ASTM A126 Class B
2.	Seat Ring	Cast Bronze	ASTM B62
3.	Wedge Face	Cast Bronze	ASTM B62

## CAST IRON GLOBE VALVE FLANGED ENDS

### Description

1. Conforms to Bs 5152
2. Flanges drilled to BS4504
3. Face to face dimensions conform to BS5152 Series 2
4. Working pressure:125S,200WOG
5. Suitable media,water,oil,gas

### Materials list of casting iron globe valve

NO.	Part	Material	American Standard
1	Body	Cast Iron	ASTM A126 Class B
2	Seat Ring	Cast Bronze	ASTM B62
3	Disc	Cast Bronze	ASTM B62
4	Gasket	Brass	ASTM B16
5	Swivel Nut	Cast Brass	ASTM B584
6	Bolts	Steel	ASTM A307-B
7	Body Gasket	Graphite	Non Asbestos
8	Bonnet	Cast Iron	ASTM A126 Class B

9	Packing	Graphite	Non Asbestos
10	Packing Gland	Cast Brass	ASTM B584
11	Gland Follower	Ductile Iron	ASTM A536 65-45-12
12	Gland Bolts	Steel	ASTM A307-B
13	Nuts	Steel	ASTM A307-B
14	Stem	Brass	ASTM B16
15	Yoke Bushing	Cast Brass	ASTM B62
16	Screws	Steel	ASTM B584
17	Hand Wheel	Cast Iron	ASTM A126 Class B
18	Identification Plate	Aluminum	Commercial
19	Washer	Steel	ASTM A307-B
20	Nut	Steel	ASTM A307-B

## Stainless Steel Globe Valve (200 WOG) Specification

Working Pressure: 200PSI WOG

Temperature Range: -20---232C

Suitable Medium : Water, oil, air and some corrosive liquid

Thread kinds: NPT.BSPT.BSP.DIN259/2999

### Main Parts and Materials

Item	Designation	Material
1	Body	CF8/CF8M
2	Petal	CF8/CF8M
3	Stem	316
4	Gasket	PTFE
5	Cap	CF8/CF8M
6	Washer	304/316
7	Gland Ring	CF8M
8	Hand wheel	Aluminum Alloy
9	Nut	304
10	Washer	304/316
11	Ring	304
12	Stem Packing	PTFE

### Brass Flange Globe Valve

#### Specification:

1. Nominal Pressure :1.6Mpa
2. Working Medium: Water,oil,gas
3. Working Temperature: under 150C
4. Parallel Pipe Thread to GB8464

## Ball Valves

As supplier and manufacturer of best quality ball valves made-in-China, our ball valves are mainly used for high pressure & high temperature services in isolation or combined with other valves. Ball valves has the advantages of wide choices of materials and range of sizes. In addition, generally low torque, low pressure drop and simple valve action are features of ball valves too. For abrasive duties, sterility, coagulating fluids and throttling applications, Other types of valves should be chosen.

A quarter-turn valve with a spherical closing element fixed between two seats.

The characteristics include quick opening and good shut-off. Ball valves are widely used as on/off valves in the chemical processes and other industries. Special designs are available for throttling applications. Larger valves with heavier balls may use trunnions to help support the ball and prevent damage to soft internals. Designs are typically, one, two or three pieces.

Bellows Sealing device prevents lined media leaking between the stem and the body.

## Ball Valve Standard Features:

### ■ Double Block and Bleed:

The fluid entrapped in the valve body is bleedable with the ball in fully closed position to API Spec 6D provisions.

### ■ Valve Bore:

Valve are of full or reduced bore design. Reduced bore is of Venturi type. Minimum bore size is to API 6D requirements.

### ■ Body Structure:

The manufacture of the body is of three types: split-body or welded-body or top-entry. The split or welded body design is used for valve side-entry type. It consists of three forged steel pieces joined by bolting or welding respectively. The body of valve top-entry type is made of one cast steel piece.

### ■ Antistatic Design:

Stainless steel springs ensure the electrical continuity between all the valve metal parts (e.g. body, ball, seat rings and stem) which could be isolated by electrometric or thermoplastic seals.

### ■ Pressure unbalanced ball:

Unless otherwise requested, no hole is provided for the ball to equalize the pressure of the fluid in the pipeline to the one of fluid entrapped in the body cavity when the valve is open. It enables a preventive maintenance, allowing the check of the ball seating efficiency in any valve position, with no modification of the pipeline working condition.

### ■ Anti-blowout stem design:

The stem, detachable from the ball, is blow proofed thanks to an integral abutment resting against the bonnet through a self-lubricating thrust washer.

### ■ Bi-directional seat rings:

Each seat ring is independent floating type and suitably designed to shutoff the fluid aside from its pressure distribution through the valve. So both seat rings constitute a double barrier to the fluid, because of the downstream seat ring ensures shutoff of the fluid in case the upstream one fails. As any overpressure of the fluid entrapped in the valve body cannot be released back into the pipeline, a relief valve is fitted to the vent connection if the handled fluid is a liquid.

### ■ Ball seating:

Valves with rating lower than ANSI Class 1500# have a seat insert made of elastomer to enable double ball sealing: a primary of metal-to-metal and a secondary of soft type (Fig.a). Valves with higher rating are provided with a seat insert made of thermoplastic resin (like Nylon or filled PTFE) to ensure a soft bubble-tight only against the ball (Fig.b). In addition, a double plastic+elastomer seal is recommended for valves having a stainless steel trim with no plating to be used in very low pressure service (Fig.c).

### ■ Double Seal of stem:

Two elastomeric O-rings provided with backup in **PTFE** perform a double stem barrier to the fluid. The outer O-ring can be replaced with the valve under pressure.

### Air Valve Forging Brass Ball Valve

## Two Piece Flanged Full Port Ball Valve

Full port construction improves flow characteristics for greater process efficiencies

Blow-Out-Proof Stem: Stem is bottom loaded to prevent removal when valve is in service

Locking Device: Enables plant personnel to secure valve in open or closed position when manually operated

Live-Loaded Stem Packing: Provides constant load on the stem seal and extends service life

Corrosion Resistant: Made of 316 stainless steel for greater chemical resistance and longer service life.

### Specification:

- Working Pressure: 1000PSI WOG
- Suitable Temperature: -20---232C
- Suitable medium: water, oil, gas and some corrosive liquid.

### Full Port three-pieces ball valve

- Dynamic loading on stem packing ensures a tight seal through varying pressure and temperature conditions, reducing maintenance costs and extending service life
- End Cap Alignment Step: Ensures easy and proper alignment between mating parts
- Full Port Design: Improves flow resulting in increased process efficiencies
- 3-Piece Construction: Easy to repair
- Stem is bottom loaded to prevent removal when valve is in service
- Locking Device: Enables plant personnel to secure valve in open or closed position when manually operated
